SUMMARY

Backend Software Engineer with ~4 years building scalable, production-grade systems in Core **Java**, **J2EE**, **Spring Boot**, and **JPA/Hibernate**, following **SOLID** principles and **OOP** design patterns. At CarInfo, owned and scaled Pre-Delivery Inspection to 7,000+ orders/month across 3 platforms, re-architecting into a multi-tenant system. At 17Live, built real-time Java socket infra for 50,000+ concurrent connections. Seeking backend roles in Agile/Scrum teams to own complex systems end-to-end.

SKILLS

Languages & Concepts: Java, J2EE, Python, JavaScript, OOP, SOLID Principles, DSA, Collections, SQL, PL/SQL, System Design, LLD, Multithreading, Concurrency, Design Patterns, Event-Driven Architecture, REST Architecture, Distributed Systems.

Backend & Databases: Spring Boot, Spring Framework, Node.js, REST APIs, Microservices, WebSockets, Java Sockets, PostgreSQL, MySQL, MongoDB, Redis, Kafka, RabbitMQ, BigQuery, Elasticsearch, API Security, Rate Limiting, Auth & Authorisation, Firebase Auth, JPA/Hibernate, Web Services, SOA, Schema Design, Query Optimisation.

Cloud, DevOps & Practices: GCP, AWS, S3, Firebase, Kubernetes, Docker, CI/CD, Git, Nginx, Agile/Scrum, Unit Testing, Code Reviews.

Tools & AI: OpenAI APIs, Postman, Swagger, IntelliJ, Android Studio, Jira, Gradle, Lombok, React Native, Shell Script.

EXPERIENCE

Software Developer - Backend

CarInfo (Cars24) | June 2025 - April 2026

- **Feature Launch (PDI):** Owned end-to-end PDI service in Java/Spring Boot with PostgreSQL & MongoDB, processing 7,000+ orders/month with config-driven pricing; AWS Lambda for report generation, deployed across 3 platforms (Cars24).
- **PDI Scale & Multi-Tenancy:** Re-architected PDI into a multi-tenant system with Kafka-driven event flows and ops dashboard for step-level tracking and interventions, cutting code discrepancy by 8% and reducing ops escalations.
- **Vehicle History Optimisation:** Refactored Vehicle History module with PostgreSQL query optimisations, stored pricing in AWS S3 with Redis caching; cut error rates by 30%, driving ~2% order conversion and ~5% revenue uplift.
- **Config-Driven Architecture:** Cut dev involvement by 50% by building a custom CMS for product-side config, enabling dynamic schemas, flexible views, and 2x faster iteration cycles.
- **API Security & Backend Hardening:** Implemented secure API design patterns — rate limiting, authentication guards, and request validation — to prevent data scraping; reduced unauthorised API traffic by 20% and improved system reliability.
- **Centralised Event Tracking:** Built unified event-firing SDK for Firebase and Meta; conducted unit testing and code reviews across the module, reducing instrumentation bugs by 40%.

Software Engineer

17Live Inc. | Sept 2022 - May 2025

- **Real-Time Infrastructure:** Architected real-time backend with Java Sockets, Redis caching, and heartbeat mechanisms powering chat, poking, and voice for 50,000+ concurrent connections (load-tested).
- **Backend API Development:** Scaled RESTful APIs in Java/Spring Boot with PostgreSQL, cutting response time from 10s→2s (SQL optimisation, lazy loading) and 5s to sub-second (multithreading).
- **AI-Powered Features:** Shipped Speech-to-Text and conversation summarisation via OpenAI APIs, cutting manual moderation effort by ~60%.
- **Analytics & Recommendations:** Owned BigQuery analytics pipeline; wrote SQL queries and data models powering recommendation logic and product insights.
- **Cross-Functional Mentorship:** Mentored 3 engineers across Android, iOS, and backend through code reviews, unit testing, and design discussions, accelerating team onboarding.
- **Authentication & Security:** Designed secure authentication flows using Firebase Phone Auth and Google Sign-In, following compliance standards; achieved 95%+ success rate.
- **Web Services & Integration:** Built and consumed RESTful web services and internal service integrations using Spring Boot and JPA/Hibernate, supporting OOP-driven modular design across the platform.

PROJECTS

- **Retail Revamp:** Built offline-first sync engine in Java with conflict resolution; 1,000+ transactions, 20+ concurrent users at sub-500ms; designed SQL schema for multi-device sync; Whisper voice commands for low-literacy users.
- **Debatabl:** Built real-time backend in Java with concurrent room management, RBAC, and live scoring for 50+ rooms; followed OOP and SOLID principles, unit tested core modules; delivered as Android platform for structured live debates.

EDUCATION

B. Tech | Computer Science | CGPA - 8.0

MD University, Rohtak

2018 - 2022
